

205 Series

Irritrol Systems...

The choice of the professional irrigation contractor

Trust the products that irrigation contractors have counted on for years! Professional-grade Irritrol Systems components are designed and manufactured with a focus on heavy-duty construction, dependable operation and homeowner convenience.

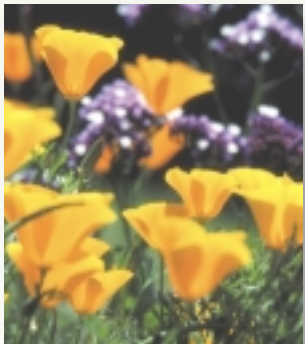

A brand of The Toro Company specifically for professional irrigation installers, Irritrol Systems is a name you can trust to help provide the beautiful, trouble-free lawn and garden your home deserves.

An industry standard for years, 205 Series valves are the ideal solution for residential landscapes.

205 Series valves: For out-of-sight, out-of-mind dependability

Buried in a box beneath your landscape, a valve is the "heart" of your irrigation system. It controls the flow of water through your system, opening and closing according to the messages it receives from your automatic controller. Though a simple task, it is critical to the health and beauty of your lawn and plants.

A favorite for residential systems for more than a decade, the 205 Series offers the features required for no-nonsense performance. This debris-tolerant valve, often selected for residential systems supplied with recycled or well water, can be serviced without removal from the system.

The 205 Series provides:

- Heavy-duty, UV-resistant PVC construction for durability
- Specially designed internal components for a leak-proof seal
- A metering pin system designed to resist clogging from debris
- An optional flow control handle for easy adjustment and manual shut-off
- A self-aligning bonnet and captured screws for trouble-free servicing
- Both threaded and slip models for installation flexibility
