

▶ 48-Hour Irrigation Hold

Automatically prevents irrigation for 48-hours following rainfall. Designed to meet local mandates and eliminate unnecessary fines.

Saves Water

Independent testing shows a rain sensor offers 30-35% water savings over basic irrigation controllers.

Prevents Over-Watering

Turns the irrigation system off during rain and low temperatures. Reduces water waste.

WR2-48 Wireless Rain/Freeze Sensor with Automatic 48-hour Hold

Taking the Guesswork Out of Water Conservation

Rain Bird is once again at the forefront of innovation, offering a wireless rain/freeze sensor that meets the strictest government mandates while helping to lower your water bills.

The WR2-48 takes everything great about the original WR2 and adds an automatic, 48-hour shut-off feature. A familiar, four-button receiver for programming, and the industry-leading Sensor Mounting Bracket makes single-person install impossibly simple.

Choose your own rainfall or low temperature set points and save up to 35% on water usage while promoting lush, beautiful landscapes.

Faster installations

- Single person installation.
- LED on the sensor indicates signal strength, eliminating the need to walk back to the receiver.
- Versatile mounting bracket attaches to a gutter or vertical surface.

Easy to Use

- Programs in seconds.
- Large LCD displays all settings in one location.
- Battery replacement requires no tools.

Superior Signal Reliability

- Signal strength is displayed on wall unit and sensor.
- Communicates out to a range of 700 feet (213.4m) from the wall unit.
- Communicates every 45 seconds to ensure reliability.

Programs in seconds

Sensor installs easily using versatile mounting bracket

Determine best sensor location using signal strength indicator

Battery replacement requires no tools or sensor disassembly

Superior Features

- WR2 suspends irrigation in three ways:
 - · Accumulated rainfall.
 - · Quick Shut Off.
 - · Automatic 48-hour hold after rainfall.
- Pair one sensor with multiple controllers:
 - Installation time and product cost savings on commercial properties.
 - Customized rainfall and temperature set points for each irrigation controller.
